

## UNIT-e Student Record & Tracking Solution (SRTS) Professional Placements

### Providing you with an efficient system to monitor your Professional Placements.

Many of today's education programmes and qualifications require the learner to prove their competence in the workplace. These activities must be monitored closely to ensure the knowledge gained during academic study can be converted to skills in the workplace. **UNIT-e SRTS Professional Placements** is a new module that tracks this activity.

Typically a placement student will be supervised by an academic member from the institution in conjunction with a placement supervisor who agrees to supervise the day-to-day aspects of the placement. A member of the academic staff will visit the student and meet with the company supervisor during the placement to monitor and report on student progress.

**UNIT-e SRTS Professional Placements** enables you to record organisation details including the staff involved in placement activity, be they from the institution or the workplace.

Students can be allocated to placements either individually or via a batch process, during which the placement tasks can be defined.

Meetings can be scheduled, for example, the academic supervisor visits. Outcomes and notes from these meetings can be recorded.

Letter generation routines ensure that all parties involved receive the information they need during the placement appointment process.

### Benefits

- Centralised records for all students and placements
- Single data source for all organisation records
- Powerful, flexible solution for all Professional Placement and Work-Based Learning administration
