

## UNIT-e Student Record Tracking Solution (SRTS) Student Enrolments

The core functionality within UNIT-e is the student tracking system fronted by powerful business driven enrolment applications.

### What does it do?

The enrolment process records all student and related curriculum information together with financial data, including phased payments, deposits, receipts and data for statutory returns.

Enrolments can be made individually (student by student) or in blocks, for example single applications to enrolment or a complete cohort moving from Year 1 to Year 2. Enrolments can be made using curriculum balancing tools that provide a flexible and configurable way of spreading enrolments across curriculum elements.

Enrolments can also be made via the web using the online enrolments facility that includes support for secure credit and debit card transactions.

### UNIT-e Student Managers

A set of manager forms provides consistent traditional windows tabbed data input form and is available with configurations for English, Scottish and Welsh FE and Higher Education.

In addition to data capture the enrolment system also provides validation of data for ILR purposes the system also has a comprehensive audit trail allowing you the check who what and when records were added and updated.

### UNIT-e Student Proformas

Proformas provide the ability to define rapid data input forms. This allows institutions to design screens that follow the enrolment form layout, to add or remove data fields and to rename field descriptions. In addition the forms can be used to collect and display media items such as student photographs, scans of certificates etc.

### DEFT

Direct Enrolment and Financial Transactions (DEFT) provide an EPOS style enrolment till for use during busy enrolment periods.
